Ultra-tec® CABLE RAILING SYSTEM

Allow us to make your railings virtually invisible with the Ultra-Tec® Cable Rail System. Using our pre-designed metal frames or styles of your own interfaced with Ultra-Tec® hardware, you now have the resource in Atlas Iron Works necessary to meet the unique requirements of a properly constructed cable railing.

Prior to the Ultra-Tec® System, marine and industrial hardware was all that was available. Many of these products have sharp edges, uneven hand-crimped shanks, exposed nuts and other unattractive features. But not anymore, the Ultra-Tec® tensioners and mounting hardware are precision machined, type 316 stainless steel fittings that are very sleek and attractive. The Invisiware® terminals can actually be concealed within the railing end post. Therefore, no bulky turnbuckles to interfere with the view through the railing. Not only is the Invisiware® terminals the least visible, but they are also the least expensive in the product line. The hardware is suitable for metal-framed railings and wood.

At Atlas Iron Works we are specialist in all forms of railings.

Let us quote, build and install a cable rail for you today.

Ultra-Tec® Cable Railing System by Atlas Iron Works:

- Cables allow for a virtually unobstructed view
- Aesthetically appealing
- No bulky turnbuckles necessary
- Low maintenance
